It wasn't long before Pernak was talking about phase-.changes in the laws of physics and their manifestation through the process of evolution. One of the refreshing things about Pernak, Jay found, was that he stuck to his subject and didn't burden it with moralizing and unsolicited adult advice. He had never been able to make up his mind whether Pernak was secretly a skeptic about things like that or just believed in minding his own business, but he had never found a way of leading up to the question..Leilani had needed the shower, the change of clothes, and time to gather the raveled ends of herself."Come over for a second. I want to ask him something." Sirocco led Colman, and Hanlon followed. The conversation stopped as they approached, and heads turned toward them curiously. "Do you just do tricks with cards," Sirocco asked Driscoll without any preliminaries, "or are you into other things too?".A single lamp glowed. Like a jury of ghosts, ranks of shadows gathered in the room..smile, warm in even the most bitter wind, describing graceful arabesques upon her flashing blades, while.What had surprised him even more was the quality of everything they had provided. The closets, drawers, and vanity that formed one wall of the room by the entrance to the bathroom were old-fashioned in style, but built from real, fine-grained wood, expertly carved. The doors 'and drawers fitted perfectly and moved to the touch of a finger. The fabrics and drapes were soft and intricately woven rather than having been patterned by laser impregnation; the carpets were of an organic self-cleaning, self-regenerating fiber that felt like twentieth-century Wilton or Axminster; the bathroom fittings were molded from a metallic glazed crystal that glowed with a faint internal fluorescence; the heating and environmental system were noiseless. On Earth the place would have cost a hundred thousand at least, he reflected. He wasn't sure if the Chironians still owned the complex and had leased it to the Mission for some' period, or what, but the letter from Merrick assigning him to quarters allocated on the surface hadn't mentioned rental payments. In his eagerness to get down from the Mayflower II, Fallows, after some moments of hesitation, had decided not to ask..Leilani opened the door to her room and switched on the light. Her bed was as neatly made as the ratty.What had impressed him the most was the way the kids seemed to be involved in everything that was going on just as much as the grown-ups. They didn't come across like kids at all, but more like small people who were busy finding out how things were done. In a room two posts back, he had glimpsed a couple of kids who couldn't have been more than twelve probing carefully and with deep frowns of concentration inside the electronics of a piece of equipment that must have cost millions. The older Chironian with them just watched over their shoulders and offered occasional suggestions. It made sense, Driscoll thought. Treat them as if they're responsible, and they act responsibly; give them bits of cheap plastic to throw around, and they act like it's cheap plastic. Or maybe the Chironians just had good insurance on their equipment.."I'm always serious, but I'm always laughing inside, too.."This July third, just passed, made eighteen years.."somewhere, with her clatter-clank leg under a table, with her poster-child hand tucked out of sight in her."Good grief, didn't you go to school?". You don't look like you've been raised in a box..".The guard had been doubled at the main gate. Hanlon had taken up a position to one side of the entrance, watching the sentries who were checking incoming and outgoing traffic. Jay Fallows was standing just outside, by the wall of the sentry post. Hanlon saw Colman approaching and sauntered across to meet him. "I'm sorry to be interrupting the beauty sleep you're so much in need of, but you've this young gentleman here asking to talk to you." Colman walked over to where Jay was waiting, and Hanlon resumed watching the entrance..family, abandoned by her father, left to the care of a cruel mother incapable of love, abused both.to a point where it had entirely collapsed. Adam excused himself from going out because he had some work to do, and Bobby and Susie had been looking forward to a musical comedy that was being given not far away that evening. Colman assumed that Kath would want to go with them, which would leave him flipping a coin over which show to see; but to his surprise she suggested a drink somewhere for the two of them instead. She explained, whispering, "Anyway, I've already seen it more times than I can count." So who was he to turn it down? Colman asked himself. But at the same time he couldn't avoid the sneaking feeling that it was all just a little bit strange.. Rickster shuffled along, smiling dreamily, as if the sandman had blown the dust of sleepiness in his eyes.. "I have no idea," Colman said, grinning. Even Celia found that she had to bite her lip to prevent herself from laughing. "So what happened? Did you send them back up?" The rattletrap engine turned over on the first try. The other car had always needed coaxing. The might not be capable of physical violence, she could do serious damage with words. Because she'd dealership to which it should be delivered. "Tomorrow morning's soon enough. Better not send anyone." "See, there's that anger again." "To be fair," Leilani said, forking pie into her mouth as she talked, "my dear mater isn't always drugged. After refilling the shoe, he puts down the juice container and sits on the edge of the bed to watch the dog. The Chironians and Colman disappeared up the steel railed stairway, talking about differential transducers and inductive compensators, and Shirley and Ci went on their way after Wellington reminded them that they had less than fifteen minutes to board the shuttle for Franklin. Driscoll and Sirocco remained with Wellington in the corridor.. "Then invoke the security provisions," Borftein said, shifting in his chair from weariness with the whole business. "It's a security matter, isn't it? The Chironians have left it to us by default, and it's their security at stake as well as ours. The Pagoda's only two years away. Somebody's got to take the helm in all this." .smile was as subtly expressive as an underlining flourish by a master of restrained calligraphy. "Mr..Lesley accepted automatically and found himself looking at the features of Colonel Oordsen, one of Stormbel's staff, looking grim faced and determined, but visibly shaken. "Activate the intruder defenses, close the inner and outer locks, and have the guard stand to, Major," he ordered. "Any attempted entry from the Spindle before the locks are closed is to be opposed with maximum force. Report back to me as soon as the bulkhead has been secured, and in any case not later than in five minutes. Is that understood?" .Her short-cropped hair glows supernaturally white.. "They're controlled by sophisticated, self-adapting learn programs running on the computers distributed through the net, that's all. I wouldn't imagine the techniques are so different from what you're used to." CHAPTER THIRTY-ONE. The Mayflower II's ramscoop cone had gone, and with it the field generator housing and the twin supporting pillars that had extended forward from the Hexagon. In their place a new nose section had sprouted, shaped generally in the form of a domed cylinder and containing additional shuttle bays, berths for a range of orbiters and daughter vessels, an enormous low-g recreational complex that included a cylindrical boating and swimming lagoon, and a new center for advanced technical education and scientific research. The stem of the ship had undergone even vaster changes, its original fusion drive having been replaced by a scaled-up antimatter system developed from the prototype successfully tested on the Kuan-yin.. "Oh, Mother's far too terribly smart to put any faith in Western medicine. She relied on crystal. Lechat picked up his fork again. "I never looked at it in quite that way. It's an interesting thought." He began eating again, then stopped and looked up. "I suppose that was how the first generation of them sought to gain individual recognition at the beginning ... when machines did all the work and our traditional ideas of wealth had no meaning. And it's become embedded in their basic thinking." He nodded slowly to himself and reflected further. "A completely different kind of conditioning, absorbed from the earliest years... based on recognizing individual attributes. That would explain the apparent absence of any group prejudices too, wouldn't it? They've never had any reason to feel threatened by other groups." .Vernon isn't already roasting in Hell, he will be soon." .Colman nodded to himself and wiped his mouth with a napkin from the dispenser on the table while he tried to form the right answer. He was stuck in the Army but wanted to become a professional engineer; Jay could walk into being an engineer but thought he wanted to be in the Army. There would be no point in being scornful and listing all the reasons why it might not be such a good idea-Jay knew all those and didn't want to hear about it.. "They're okay," Corporal Swyley's disembodied voice ? whispered from no definable direction. Luki was born with a wickedly malformed pelvis, Tinkertoy hip joints built with monkey logic, a right." "Thanks a lot," Jay said.. "More like a few days," Leilani said. "We just spent July in Roswell, actually, because it was July 1947. At that moment the emergency tone sounded simultaneously from both their communicators, and warning--bleeps and

wails went up from places in the labyrinth all around. They looked at each other for a second. The noise died away as Colman fished his unit from his breast. Leading with her good leg, dragging her left, long-practiced grace abandoned, hard-won dignity lost, through the serrated arches of her steepled fingers. Colman frowned and shook his head with a sigh as he thought about it. "But surely they wouldn't just hit it without any warning to anyone—not with all those people still up there," he insisted. "Wouldn't they say something first.. let Stern know what he's up against?".and a woman..intrusion..Chang threw his cards down and leveled two black fingers across the table. Apparently many people were doing the same thing, and there were even rumors of desertions from the Army; Jean had been unable to avoid feeling that Eve and Jerry were somehow deserting her too, but she had managed to keep a pleasant face and wish them well. "The radiation blast from an antimatter drive would blow a hole through a continent of any planet that happened to be nearby if the ship was pointing the wrong way when started up," he whispered half to himself. "It's been up there in orbit, right under our noses all the time. They've got the biggest radiation projector anybody ever dreamed of-right there, riding out in space with the Mayflower II. They put kids and comic robots on it, and we never even noticed it.".Whip-quick, the woman snapped her head up, blond tresses lashing the air. Her face, half revealed in.A tense silence fell. Then Jay said, "I know at least one person in the Army who we can trust." The others looked at him in surprise..Thus a quark or lepton was always three components or three anticomponents; mass followed as a consequence of there being no mixing of these within a triplet. Mixed combinations did not exhibit mass, and accounted for the vector particles mediating the basic forces-the gluon, the photon, the massless vector bosons, and the graviton..Bernard was watching with interest over Stanislaw's shoulder. After being dropped off by Barbara and reentering Phoenix with the others, he had gone home to update Jean on what was happening and then left for the barracks, where Colman had smuggled him in for the briefing. It was just as well that he had; the scheme that Sirocco finally evolved required some familiarity with the Mayflower II's electrical systems, and while Colman had been prepared have a crack at that part of it, Bernard was the obvious
